Standards

Counting and Cardinality

K.3 Number and operations. The student applies mathematical process standards to develop an understanding of addition and subtraction situations in order to solve problems.

K.3.A Model the action of joining to represent addition and the action of separating to represent subtraction. **K.3.A** Model the action of joining to represent addition and the action of separating to represent subtraction.

K.3.B Solve word problems using objects and drawings to find sums up to 10 and differences within 10.

K.3.C Explain the strategies used to solve problems involving adding and subtracting within 10 using spoken words, concrete and pictorial models, and number sentences.

K.2.E Generate a set using concrete and pictorial models that represents a number that is more than, less than, and equal to a given number up to 20.

K.2.F Generate a number that is one more than or one less than another number up to at least 20.

K.2.H Use comparative language to describe two numbers up to 20 presented as written numerals

K.2.I Compose and decompose numbers up to 10 with objects and pictures

Standards

(3) Number and operations.

The student applies mathematical process standards to develop and use strategies for whole number addition and subtraction computations in order to solve problems. The student is expected to:

- (B) use objects and pictorial models to solve word problems involving joining, separating, and comparing sets within 20 and unknowns as any one of the terms in the problem such as $2 + 4 = []$; $3 + [] = 7$; and $5 = [] - 3$;
- (C) compose 10 with two or more addends with and without concrete objects;
- (E) explain strategies used to solve addition and subtraction problems up to 20 using spoken words, objects, pictorial models, and number sentences; and

(5) Algebraic reasoning.

The student applies mathematical process standards to identify and apply number patterns within properties of numbers and operations in order to describe relationships. The student is expected to:

- (C) use relationships to determine the number that is 10 more and 10 less than a given number up to 120;
- (D) represent word problems involving addition and subtraction of whole numbers up to 20 using concrete and pictorial models and number sentences;
- (E) understand that the equal sign represents a relationship where expressions on each side of the equal sign represent the same value(s);
- (F) determine the unknown whole number in an addition or subtraction equation when the unknown may be any one of the three or four terms in the equation; and
- (G) apply properties of operations to add and subtract two or three numbers.

Standards

(4) Number and operations.

The student applies mathematical process standards to develop and use strategies and methods for whole number computations in order to solve addition and subtraction problems with efficiency and accuracy. The student is expected to:

- (A) recall basic facts to add and subtract within 20 with automaticity;
- (B) add up to four two-digit numbers and subtract two-digit numbers using mental strategies and algorithms based on knowledge of place value and properties of operations;
- (C) solve one-step and multi-step word problems involving addition and subtraction within 1,000 using a variety of strategies based on place value, including algorithms; and
- (D) generate and solve problem situations for a given mathematical number sentence involving addition and subtraction of whole numbers within 1,000.

(6) Number and operations.

The student applies mathematical process standards to connect repeated addition and subtraction to multiplication and division situations that involve equal groupings and shares. The student is expected to:

- (A) model, create, and describe contextual multiplication situations in which equivalent sets of concrete objects are joined;

(7) Algebraic reasoning.

The student applies mathematical process standards to identify and apply number patterns within properties of numbers and operations in order to describe relationships. The student is expected to:

- (A) determine whether a number up to 40 is even or odd using pairings of objects to represent the number;
- (C) represent and solve addition and subtraction word problems where unknowns may be any one of the terms in the problem.

Scope and Sequence: Third Grade TEKS

Relate this to moving left to right on the number line. the role of the numerator in the fractions. the need for each section of the rectangles to cover the same amount of area as the other sections in the rectangle in order for them to be the same fractional part. that each bar or number line model may not look alike or be the same size but it can represent the same number. the role of the denominator in partitioning the number line and counting by unit fractions to locate a number on the number line. the number of unit fractions that are equal to one. the role of the numerator and denominator in locating a fraction on the number line. | <p>Students:</p> <ul style="list-style-type: none"> count the unit fractions as the fraction pieces roll out on the number line. continue to discuss the role of the numerator and denominator in the fractions and how that helps them solve the puzzles identify each section as a unit fraction and discuss how many unit fractions are in the whole. count the different number of sections by unit fractions and name that amount as an a/b fraction. determine strategies for partitioning a number line into fractions and estimating the location of a number on the number line by counting by unit fractions. determine how to use benchmark numbers to locate a fraction on the number line. use directional (right or left) comparison of fractions on the number line. | <p>Students:</p> <ul style="list-style-type: none"> add unit fractions on a number line and write an equation to show the location of the sum. compare how the circles on the Jiji cycle and the number line represent the number. write expressions or equations to represent the puzzles. write numbers as fractions greater than one and mixed numbers. build bar models with different manipulatives. Compare the bar models and discuss what number each bar model represents and where that number would be located on the number line. create a number line and partition it to locate the given fractions. |

Standards

(3) Number and operations.

The student applies mathematical process standards to represent and explain fractional units. The student is expected to:

- (A) represent fractions greater than zero and less than or equal to one with denominators of 2, 3, 4, 6, and 8 using concrete objects and pictorial models, including strip diagrams and number lines;
- (B) determine the corresponding fraction greater than zero and less than or equal to one with denominators of 2, 3, 4, 6, and 8 given a specified point on a number line;
- (C) explain that the unit fraction $1/b$ represents the quantity formed by one part of a whole that has been partitioned into b equal parts where b is a non-zero whole number;
- (D) compose and decompose a fraction a/b with a numerator greater than zero and less than or equal to b as a sum of parts $1/b$;
- (E) solve problems involving partitioning an object or a set of objects among two or more recipients using pictorial representations of fractions with denominators of 2, 3, 4, 6, and 8;
- (F) represent equivalent fractions with denominators of 2, 3, 4, 6, and 8 using a variety of objects and pictorial models, including number lines;
- (G) explain that two fractions are equivalent if and only if they are both represented by the same point on the number line or represent the same portion of a same size whole for an area model; and
- (H) compare two fractions having the same numerator or denominator in problems by reasoning about their sizes and justifying the conclusion using symbols, words, objects, and pictorial models.

Standards

(2) Number and operations. The student applies mathematical process standards to represent, compare, and order whole numbers and decimals and understand relationships related to place value. The student is expected to:

- (E) represent decimals, including tenths and hundredths, using concrete and visual models and money;
- (G) relate decimals to fractions that name tenths and hundredths; and
- (H) determine the corresponding decimal to the tenths or hundredths place of a specified point on a number line.

(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:

- (A) represent a fraction a/b as a sum of fractions $1/b$, where a and b are whole numbers and $b > 0$, including when $a > b$;
- (B) decompose a fraction in more than one way into a sum of fractions with the same denominator using concrete and pictorial models and recording results with symbolic representations;
- (C) determine if two given fractions are equivalent using a variety of methods;
- (D) compare two fractions with different numerators and different denominators and represent the comparison using the symbols $>$, $=$, or $<$;
- (E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations;
- (F) evaluate the reasonableness of sums and differences of fractions using benchmark fractions 0, $1/4$, $1/2$, $3/4$, and 1, referring to the same whole; and
- (G) represent fractions and decimals to the tenths or hundredths as distances from zero on a number line.

| Week 1 | <ol style="list-style-type: none"> Learn the routines and expectations for ST Math Immersion. begin working with problems involving fractions. Understand the relationship of fractions ($\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{10}$) to decimals. | 5.3.H | <p>Students:</p> <ul style="list-style-type: none"> will develop an understanding of the Problem Solving Process and use of this thinking strategy for solving puzzles in ST Math. Students will be engaged in conversations and practice that will teach them how to utilize the strategy. will begin solving problems involving fractions, including all 4 operations, and understanding fractions as numbers. will develop an understanding of the design process and understand the purpose and expectations of the stations. |
| Week 2 | <ol style="list-style-type: none"> Adding and Subtracting Fractions with Unlike Denominators. | 5.3.H | <p>Students:</p> <ul style="list-style-type: none"> use benchmark fractions, equivalent fractions and comparing fractions to create a number line to compare and order fractions, place them on a number line, and justify their reasoning for where they placed the numbers. use this to assess the reasonableness of answers as they add and subtract fractions with unlike denominators. |
| Week 3 | <ol style="list-style-type: none"> Solving problems involving multiplying a fraction or a whole number by a fraction. | 5.3.I | <p>Students:</p> <ul style="list-style-type: none"> work with area models and number line models to multiply fractions by whole numbers and other fractions. work with puzzles involving multiplication of a fraction by a whole number, a whole number by a fraction and a fraction by a fraction. relate multiplication of whole numbers to multiplication with fractions. |
| Week 4 | <ol style="list-style-type: none"> Solving problems involving dividing fractions | 5.3.J 5.3.L | <p>Students:</p> <ul style="list-style-type: none"> work with puzzles involving multiplication and division of fractions and whole numbers. work a series of puzzles that help them understand the relationship of multiplication and division. |
| Week 5 | <ol style="list-style-type: none"> Solving problems involving dividing fractions. | 5.3.J 5.3.L | <ul style="list-style-type: none"> work with puzzles involving multiplication and division of fractions and whole numbers. work a series of puzzles that help them understand the relationship between multiplication and division. |

| Ongoing Math Focus | | |
|---|--|--|
| Student Discourse | Student Problem Solving Strategies | Representations |
| <p>Students discuss:</p> <ul style="list-style-type: none"> the relationship of fractions with denominators of 2, 3, 4, 5, and 10 to decimals. how to compare fraction and decimal forms of numbers. the numerator determines the number of jumps (e.g., $\frac{3}{4} \times 5$; 0 to 5 on the number line is partitioned into 4 equal sections; Jiji jumps to the end of 3 of those sections). the role of the numerator and denominator in the visual representation and the multiplication expression. what happens to the size of the product when multiplying a fraction times a whole number and a fraction times a fraction (fractions less than and greater than one). what each number in the equation represents in the puzzle. the relationship between multiplication and division and the role of the numerator and denominator in determining the solution. | <p>Students:</p> <ul style="list-style-type: none"> determine the number of unit fractions needed to equal the given decimal sum. recognize that there are 10 hundredths for every tenth ($0.01 \times 10 = 0.1$). develop strategies for locating fractions on a number line by visually partitioning each whole into a number of sections based on the denominator and counting by unit fractions based on the numerator. develop an understanding of multiplying the numerator and denominator by the same number to find equivalent fractions. partition each whole on the number line into the appropriate number of partitions needed to locate the sum. understand that as the size of the partitions decrease the number of partitions increases to make one whole. determine how to partition the number line and determine the size and number of jumps to make when multiplying a fraction and whole number. multiply a fraction times a fraction using an area model. determine how many pies one monster would eat given a number of pies for 2 or more monsters. Then determine how many pies are needed to feed the given number of monsters. partition the pies on the game mat, and distribute the pies to the monsters. | <p>Students:</p> <ul style="list-style-type: none"> record the sum on a hundred grid to compare tenths to hundredths. locate fraction form ($\frac{1}{10}$; $\frac{1}{100}$) and decimal form (0.1; 0.01) of numbers on a number line labeled 0 to 1 with tick marks for every tenth. locate fractions on number lines with and without partitions marked. write fractions greater than 1 as mixed numbers and fractions. understand that numbers that are located at the same point on a number line are equivalent. write mixed numbers as equivalent fractions. write equations to represent the visual problem. add and subtract mixed numbers and locate the sum on a number line. see the multiplication expression play out on the number line as taking the fraction the whole number of times (jumps) from left to right on the number line. solve multiplication problems with a unit fraction or an $\frac{a}{b}$ fraction times a whole number using an area model. represent the problem on a number line and compare the two models. |

|--|--|--|
| | <ul style="list-style-type: none">• use the relationship of multiplication and division to solve puzzles involving division of whole numbers by fractions. | <ul style="list-style-type: none">• draw the area models before solving the puzzle online.• represent the puzzles on their game mats and write equations to represent the puzzle. |
|--|--|--|

Standards

(3) Number and operations.

The student applies mathematical process standards to develop and use strategies and methods for positive rational number computations in order to solve problems with efficiency and accuracy. The student is expected to:

(H) represent and solve addition and subtraction of fractions with unequal denominators referring to the same whole using objects and pictorial models and properties of operations;

(I) represent and solve multiplication of a whole number and a fraction that refers to the same whole using objects and pictorial models, including area models;

(J) represent division of a unit fraction by a whole number and the division of a whole number by a unit fraction such as $1/3 \div 7$ and $7 \div 1/3$ using objects and pictorial models, including area models;

(L) divide whole numbers by unit fractions and unit fractions by whole numbers.
