

FRACTION ROBOT

An engineer welded $\frac{1}{2}$ of a robot with $\frac{2}{6}$ of a robot.

How much of a robot does the engineer have now?

ALIEN BRIDGE

+

=

The Martian has $\frac{3}{6}$ of a fuel tank.
The Plutonian has $\frac{1}{4}$ of a fuel tank. How
much fuel do they have altogether?

$$\frac{3}{4} + \left\{ \begin{array}{c} \square \\ \square \end{array} \right\} = 2$$

$$\left\{ \begin{array}{c} \square \\ \square \end{array} \right\} = \left\{ \begin{array}{c} \square \\ \square \end{array} \right\} + \frac{1}{8}$$

$$\frac{5}{6} + \left\{ \begin{array}{c} \square \\ \square \end{array} \right\} = \left\{ \begin{array}{c} \square \\ \square \end{array} \right\}$$

$$\frac{6}{4} - \frac{1}{2} = \left\{ \begin{array}{c} \square \\ \square \end{array} \right\}$$

$$\left(\begin{array}{c} \square \\ \square \end{array} \right) + \frac{5}{8} = \left\{ \begin{array}{c} \square \\ \square \end{array} \right\}$$
