

**LOCATION:** Canada (Western Bumble Bee)

### **DID YOU KNOW?**

Canada and the United States have very similar types of wildlife, like the Western Bumble Bee. But it also has some very unique animals, such as the eastern wolf, Vancouver Island marmot, wood bison and Peary caribou. There are over 120 insect species found only in Canada, too. After reading about some of these critters and the danger that they are in, Jaymie decided to lead her neighbors in saving the bees! Bees are vital for the pollination process. How long does the pollination process take?

If we all work together, we can help save endangered and vulnerable species!

**Jaymie**

### **CANADA MATH:**

### **OTHER FUN FACTS:**

- At least  $\frac{2}{3}$  of the world's polar bears live in Canadian territory.
- Canada is home to about 80,000 plant and animal species.
- The western bumble bee is one of 30 species found in western Canada.
