

LOCATION: North Carolina (Kitty Hawk)

DID YOU KNOW?

The first powered heavier-than-air airplane to fly successfully was the "Wright Flyer." It took flight for the first time on December 17th, 1903, near Kitty Hawk, North Carolina, which is where Aarifa first heard about it. She went on a trip with her dad to the Wright Brothers National Memorial near Kitty Hawk and she was so amazed by the technology that the inventors used to create the Wright Flyer. The first four flights of the Wright Flyer lasted a total of 12 seconds. What are some things you can do in 12 seconds?

I know that one day I will invent something amazing, just like the Wright brothers!

Aarifa

NORTH CAROLINA MATH:

OTHER FUN FACTS:

- Kitty Hawk's original name was Chickahawk.
- The first flight occurred at 10:35 in the morning.
- The flight only traveled a total of 180 feet.
